

# SOFF<sup>®</sup> MUCRON<sup>®</sup>

*Multi and micro  
filament polyester*

colours & yarns for weaving

**SOFF®** and **MUCRON®** are textured polyester yarns respectively made of multi filaments (1-1,8 dpf) and micro filaments (0,5-0,8 dpf).

The full range of **SOFF®** and **MUCRON®** yarns allows us to satisfy all the demands in various fields of application: from clothing, both underwear and outerwear, to knitting (for which yarns with counts such as 50 dtex have been studied), to furnishings (with yarns with counts from 110 to 330 dtex).

### SOFF®

Yarns with multi filaments aimed at achieving the best compromise among a soft handle, a bulky feel and a good fabric strength.

Particularly suited for those products combining comfort, soft handle and colour homogeneity with precise technical requirements, such as thermal insulation, transpirability, resistance to stress and easy care.

Even with the finer DPF dyeability and colour saturation on fabrics are similar to those achieved with courser filaments.

### MUCRON®

Yarns with micro filaments which give fabrics a much softer handle, not obtainable with courser filament yarns.

Furthermore, they have a better capability to let air pass through the fabrics in open weft knit fabrics. The benefits given by the improved dispersion of perspiration and quick drying properties make them ideal for skin-contact garments such as active sports-wear.
