

*Cotton touch*

colours & yarns for weaving

The **DRYCOT** products line combines the technical properties of polyester to the natural fibres look.

This combination is particularly suitable for a wide range of products, such as home textiles or table cloths.

Fabrics made of **DRYCOT** yarns enhances a natural effect, both in touch and appearance.

Being about synthetic yarns, this feature is particularly innovative.

Sheets, towels, home textile products made in **DRYCOT** give to the person a fine feeling of naturalness, however preserving the “easy-care” properties of polyester.

Stain resistance		●	●
Soft touch	●		●
Good drape	●		●
Wearability	●		●
Abrasion resistance		●	●
Pilling resistance		●	●
Versatility		●	●

Available, on demand, with the antibacterial peculiarity for the medical sector, the **DRYCOT** yarn, which is a continuous yarn, is not subject to short fibril loss, as generally occurs with natural fibers (one of the main causes of virus spreading in hospitals).

Compared to similar products made in cotton or other fibers, and, compared to those made with the main natural fibers, the use of **DRYCOT** yarns develops the following advantages:

- Faster drying because they absorb water 30 times less.
- Improved color fastness.
- Increased resistance to tear and wear.
- Increased resistance to abrasion and pilling.
- Anti-stain properties.
