

AIRLAN[®]

SINTERAMA

Air textured yarn

colours & yarns for weaving

Yarns produced starting from different polymeric bases, with different sections, in order to obtain multiple brilliance effects and DPFs.

Their fundamental characteristic is that they have a handle similar to natural yarns, preserving all the properties of continuous yarns.

Mainly used in the automotive sector, able to appreciate their intrinsic technical properties.

Range of available counts: 170 and 2500 dtex.

HE

Yarns produced starting from copolymers which offer a considerable elasticity after texturing, particularly suitable for the automotive sector. We can supply them in raw white, package dyed and dope dyed.

Range of available counts: from 630 to 1330 dtex.

SOFF BOUCLE'

Yarns with a soft handle and bouclé finish, used to obtain fabrics with special light effects. Ideal for furnishing fabrics.

We can supply them raw white and package dyed.

Range of available counts: 1200 and 2500 dtex.
